# Ebenezer J. Rolston — Master Resume

Ebenezer J. Rolston AI-First Transformation Analyst - Program Analyst · Strategy Consultant
eberolston@yahoo.com • 501-307-3237 • LinkedIn • Denver, CO • Open to Hybrid / Relocation

PROFESSIONAL SUMMARY

AI-first transformation and Program Analyst with 20+ years turning fragmented legacy environments into unified enterprise platforms across the federal and financial sectors. That work has reclaimed millions in unused government funds, saved $1M+ every year, and brought 85+ users onto new systems. Ebenezer architected the end-to-end DOI FBMS data conversion, an award-recognized transformation spanning the entire Department, and spent 14 years as the senior escalation lead handling 5 to 10 mission-critical business issues a day. He now pairs that delivery record with a University of Denver graduate certificate in AI Strategy, building AI maturity assessments, multi-year roadmaps, and ROI-backed business cases, and translating strategy fluently for executives, contracting officers, and Congress-level stakeholders.. CORE COMPETENCIES

▪ AI-First Transformation Strategy▪ AI Maturity Assessment & Roadmapping, Business Operations Reporting, AI Incident Brief ▪ Enterprise Workflow Reimagination▪ ROI Modeling & Business Case Development * Federal Acquisition ▪ Executive & Stakeholder Communication▪ Machine Learning & NLP Fundamentals * AI Use Case Triage ▪ AI Governance, Ethics, Risk & Compliance▪ Vendor Evaluation & Selection * ETL * Data Governance ▪ Cross-Functional Program Delivery (Agile)▪ Data Integration, ETL & Cloud * Stakeholder & Vendor Relationship ▪ Client Engagement & Proposal Development▪ Change Enablement & User Training * Incident Management AI STRATEGY & TRANSFORMATION PORTFOLIO

Graduate Certificate, AI Strategy & Applications in IT | University of Denver

• Authored a 3-year enterprise AI roadmap for Mile High Logistics, covering the full engagement: AI maturity assessment, opportunity identification, readiness analysis, budgeting, ROI modeling, vendor evaluation, and executive strategy communication. It follows the same client lifecycle IBM's AI-first transformation teams run. • Developed AI-first business cases across 9 enterprise functions, from operations and manufacturing to finance, HR, legal, sales, marketing, and customer service, rethinking each department's workflow around AI and quantifying the projected value and ROI. • Produced an executive-ready AI adoption risk assessment for a healthcare LLM use case (ChatGPT Health), covering 6 risk dimensions: hallucination, bias, privacy, governance, compliance, and ethical use. This is the kind of pre-deployment framing leadership needs before greenlighting a project. • Authored 3 published papers on AI in Government Contracting, AI Strategies for Logistics, and AI Ethics in Healthcare, establishing subject-matter thought leadership. Holds formal training in AI Strategies and AI Ethics. PROFESSIONAL EXPERIENCE

Program Analyst, Acquisitions Directorate | U.S. Department of the Interior, Denver, CO Jan–Sep 2025 Senior operational and functional lead for the Acquisition Directorate's contracting business operations, and the top escalation resource for mission-critical acquisition and financial systems in a highly regulated, GS-13-level environment. • Owned enterprise-application support for mission-critical procurement and financial systems, keeping them running, compliant, and available under strict federal data-governance requirements. • Served as the senior escalation resource for system issues hitting contracting and financial operations, coordinating incident resolution across technical and business teams and shortening time-to-

resolution. • Delivered targeted user training and operational guidance that improved adoption and cut down on repeat support requests. Senior Analyst Consultant | ArkSolutions (Client: IBC Acquisition Directorate), Denver, CO 2011–2025 A 14-year client-facing consulting engagement as senior escalation point and subject-matter expert for enterprise acquisition and financial platforms, leading data transformation, root-cause analysis, training, and stakeholder mediation across a Department-wide user base.
• Architected the end-to-end DOI FBMS data conversion as ETL Architect, migrating fragmented legacy systems into one unified, Department-wide Federal Business Management System. The Department of the Interior recognized the effort with 2 awards.

Provided production support during DOI contract conversion from legacy systems into FBMS, helping stabilize acquisition and financial operations after conversion. • Reclaimed $1M+ in recurring annual savings through government contract funds deobligation, and ran funds realignment that resolved financial discrepancies between contracting officials and service providers, part of a broader effort that recovered millions in unused government funds. • Resolved 5 to 10 mission-critical business issues a day as Senior Escalation Lead on complex FBMS and PRISM incidents, analysed root causes and fixed the workflows behind them to bring recurring incident volume down. • Designed and delivered operational and cohort training for 85+ users, driving adoption and reducing support demand, the client-enablement work that sits at the center of any transformation. • Ran Unison PRISM as administrator for 7 years, owning access management, data-integrity oversight, and procurement-workflow administration across the Acquisition Directorate's contract awarding, execution, and compliance. • Mediated aviation-vendor IPAC billing disputes among contracting

officials, federal agencies, and vendors, and served as the directorate's SME on charge-card programs and aviation contracts. • Sat on the FBMS Software Advocacy Leadership Team (FSALT) and Acquisition Special Interest Group, advised 3 AQD initiatives (Realignment Builder, S/4 conversion, and UDO corrections), and provided Level 2/3 technical support to contracting officers. Represented Acquisition Directorate contracting officers as a Special Interest Group member, translating AQD requirements to FBMS development teams for feature enhancements. Tested PRISM and SAP test-environment enhancements, provided developer feedback, and validated changes against acquisition-workflow needs before production release. Gathered requirements and tested/validated an IPP invoice-approval workflow in FBMS; developers configured or built the solution, which automated notifications to CORs, COs, and AP technicians and incorporated substitute-approver controls before production rollout. Solutions Developer / Solution Architect | Acxiom Corporation 1999–2010 • Built Citibank's first Online Identity Scoring Model (early AI/ML), which stopped

significant revenue loss from fraudulent applications, and directed senior developers in building and demonstrating the nation's first airline passenger-screening system to Congress.

Provided production support for Acxiom's Application Verification System alongside developer and solution-architecture responsibilities. Interviewed Citibank, Allstate, and other financial-services and insurance clients to gather requirements and analyze identity-verification and prospecting needs; helped develop customized solutions using Trace, Polk, and in-house AVS products that moved into production use. Created solution-design documentation for AVS conversion into a new solution framework. Participated in evaluating the Muscato decision-engine framework for converting existing Acxiom products; the framework was ultimately used to modernize the legacy AVS system. • Worked as Lead Solution Architect & ETL Analyst (Choice Point Precision Marketing) and Solution Architect / Data Modeler (GE Money), building the data-warehouse and cross-sell models behind multichannel marketing campaigns and reengineering customer opt-out (CCSD) for measurable efficiency gains. • Standardized company-wide SDLC/SCM methodology as a process-improvement specialist on the Acxiom Methodology Board, leading cross-functional teams

across PMO, project management, and SMEs, and delivered a CRM/fundraising solution for St. Jude Hospital. EDUCATION & AI CREDENTIALS

Graduate Certificate, AI Strategy & Applications in IT : University of Denver M.S. & B.S., Computer Science : St. Joseph's College LLM & Agentic AI : Harvard School of Engineering and Applied Sciences Machine Learning & Deep Learning : UC Berkeley AI Governance : AI Tech and Privacy Academy Awards: Interior Business Center Award for Excellence · DOI FBMS Special Recognition Award TECHNICAL PROFICIENCIES

Generative AI & LLMs: Azure OpenAI APIs, Retrieval-Augmented Generation (RAG), Agentic AI workflows, LoRA, Unsloth, MS Copilot, Claude, Cursor, Qdrant (semantic search), Comet, REST APIs Data & Analytics: Apache Spark, PySpark, Tableau, Matplotlib, NumPy, Jupyter, Anaconda, Google Colab Programming & Query: Python, SQL, PL/SQL, Pro*C, C Databases: Oracle, SQL Server, Sybase, Microsoft Access Enterprise & Government Systems: Unison PRISM, Federal Business Management System (SAP S/4), FPDS, SAM Delivery: Agile delivery environments, GitHub, Visual Studio
PERSONAL PROFILE AND SUMMARY OF QUALIFICATIONS Mission focused highly skilled hands-on and diverse technical consulting and Technical Architecture and development experience in financial services, insurance, telecommunications, healthcare industries and Financial Procurement. Extensive methodology process creation experience. Working knowledge of SAP's ECC integrated software, and Unison PRISM and Tableau. Served in solution architecture and technical leadership roles, seamlessly and successfully bringing together mixes of technology in Data warehousing domain. Mentored and supervised staff in detailed analysis, design, and development of solutions to increase operational productivity and efficiency. Expertise in driving collaborative action and resolution between stakeholders. Self-directed. Regularly interacted with various personnel to resolve issues, answer questions, and bring the necessary resources together. Proficient in project and program management, written and verbal communications, data and program analytics and methodology process creation with Acxiom. Experience contributing to organizational optimization and change management processes. Subject Matter Expert and Go to person in the functional areas: budget execution, financial management, travel management, acquisition,

charge card, financial assistance, personal property, fleet management, and real property. Extensive experience contributing to optimization and change management processes. Regularly act as a liaison between system owners and users in order to facilitate a collaborative system optimization process. ! CORE SKILLS: ! Administration and Management ! Conflict Management ! Accountability ! Technical Knowledge ! Acxiom Data Solutions ! Project And Production Operations Management ! Agile Methods ! Financial And Business Management System (FBMS) ! Business Intelligence ! Financial Management ! Acquisition ! Aviation ! Data Warehousing ! Management ! FAR Familiarity ! Charge Card ! SAP's ECC integrated software ! Unison PRISM and Tableau ! Fiscal Accounting ! Stakeholder Collaboration ! Problem Solver ! Strategic Planning ! Quality Assurance ! Project Management ! Resource Management ! Data Management ! Process Improvement ! Software Standards ! Program Analytics ! Operations ! Advocacy ! Planning ! Leadership ! Change Management PROFESSIONAL WORK EXPERIENCE 2011 January - Present ARKSOLUTIONS – DENVER DEPARTMENT OF INTERIOR Senior Business Analyst / Senior Technical Advisor to DO AQD Supervisor: Anuj Khuranna Full-Time, 40+ Hrs. /Wk Duties, Accomplishments and Related Skills: • Winner of IBC Award for Excellence • Winner of DOI FBMS - Special Recognition Award • Provide FBMS/ PRISM Application and Functional support to the DOI Acquisition users. • Responsible for responding to Acquisition and Financial Assistance user Helpdesk tickets within DO. • Serving on the FBMS Software Advocacy Leadership Team (FSALT) Special Interest Groups (SIG) related to acquisitions , Aviation and AP • Assist various AQD and IBC program offices with policy and provide guidance to Contracting Officers • PRISM Administrator for 7 years • Perform FBMS integration testing • Manage funds deobligation, reconciliation of Funds. • Work with other SME leaders such as AP, IPP, BusOps and FMD. • Provide consultation services related to Aviation. • Provide guidance on usage of SAM, Beta SAM, FPDS, IPP, FedConnect. • Chief POC for Aviation IPAC ,providing functional support to IPAC Tech. • Act as a liaison between Contracting officers and Charge Card Reallocation team. • Familiar with Tableau and Core Financial Reports. • Established and performed Funds realignment to resolve Funding discrepancies. • Provide thought leadership in establishing Contract Closeout Process. • Subject Matter Expert in the functional areas: budget execution, financial management, acquisition, charge card, financial assistance, Sales and Distribution and non-fleet management. DOI – BIO (2011-2013) Supervisor: Chad Mock Full-Time , 40+ Hrs. /Wk Duties, Accomplishments and Related Skills: • Worked as the ETL Architect for National Park Services , Bureau of Indian Affairs , Reclamation and Fish and Wild Life to convert the existing legacy financial/acquisition system to FBMS. • Provided direction and oversight for gathering business requirements and implementing the data conversion / translation rules for acquisition system, in Oracle. • Provided consultancy services to Bureau of Reclamation in Data Cleansing the IDEAS a real-time procurement desktop application. • Established data extraction, load and translation process for twelve source databases, including data profiling the legacy data and metadata for conversion. • Worked closely with the DOI bureau leads and provided consultation services on data cleansing and translation rules. PRISM 7.2, SAP, Oracle 10g, PL/SQL, SAP, Stored Packages, Data Import/Export, Data Pump.
2010 May - 2011 MPHASIS HP – TENNESSEE TENNCARE MEDICARE Project Leader / Systems Engineer Duties, Accomplishments and Related Skills: • Worked closely with Business Analyst, Project Manager to establish the update eligibility process for the TennCare program. • Established and implemented migration of JILS job automation for the new infrastructure. 2009 August 2010 March CHARTER GLOBAL /IMPACT BUSINESS GROUP Senior Oracle Consultant for Leading Medical Insurance Company, Michigan Duties, Accomplishments and

Related Skills: • Worked closely with Business Analyst, Project Manager to establish the migration of the medical insurance application from Sybase to Oracle. • Performed data and impact Analysis and re-engineered legacy applications for the provision of new medical insurance product_in FACETS. • Developed and re-engineered Healthcare business reports ensuring effective operation of the medical reporting system. 1999-2009 ACXIOM CORPORATION June 2008 - 2009 Choice Point Precision Marketing (CPPM): Lead Solution Architect & ETL Analyst for Campaign Management Solutions Supervisor: Morgan Beard, Full-Time Duties, Accomplishments and Related Skills • Provided direction and oversight for coupling and conversion of CPPM data processing products acquired by company • Communicated detailed and accurate data on requirements and design flows. • Rebuilt solution in Oracle and interfaced with Affinium Unica application to improve performance and allow clients to capture various opt out requirements of end user. • Teamed with client's implementations specialists designing common interface to any products to ensure uninterrupted transfer and proper functioning of existing solution. July 2006 -June 2008 GE MONEY FINANCIALS: SOLUTION ARCHITECT, DATA ANALYST/MODELER & ETL DEVELOPER FOR DWH APPLICATIONS (MULTICHANNEL & PROSPECT CAMPAIGN MANAGEMENT) Supervisor: Morgan Beard, Full-Time Duties, Accomplishments and Related Skills:
• Consulted with client to design and implement various and cross-sell models. • Collaborated with client's Marketing Manager to manage expectations and define model design. . • Oversee project operations, including definition of requirements, development of functional specifications, documentation of design, and mentorship of Development methodology and related procedures. • Reengineered the Customer Choice Suppression Data (CCSD) solution to enhance provision of opt out data for client's customers. • Promoted efficiency through design and implementation of self- tracking procedures for ETL solution. Sep 2005 - Aug 2006 OSI (FINANCIALS AND COLLECTION): ETL DEVELOPER FOR STAR SCHEMA DWH Supervisor: Morgan Beard, Full-Time Duties, Accomplishments and Related Skills: • Built star schema to house EDA data for OSI outsourcing solutions. • Defined and created SCM procedures via automated scripting for CVS repository. • Designed and implemented self-tracking procedures for the update process restart, ensuring efficiency of ETL solution. • Concurrently served as process improvement manager, supervising crossfunctional teams Sep 2005 – July 2006 ACXIOM METHODOLOGY BOARD – PROCESS IMPROVEMENT MANAGER (SCM, SQA& SDLC) Duties, Accomplishments and Related Skills: • Served as Process Improvement Manager established methodology for the company, supervising cross-functiona la l(PMO, PrM, PM, Subject matter experts). • Lead a team of associates, including off site members, from different phases of SDLC to determine the best methodology for Acxiom solution/database developers, including SCM principles. • Co-developed an application in VB.Net & Ms Access, SQL Server to manage requirements gathering, design, Source Code Management and Component reusability. Aug 2005 - Sep 2006 CLIENT ST. JUDE HOSPITAL: CRM ARCHITECT & ETL DEVELOPER Supervisor: Morgan Beard, Full-Time Duties, Accomplishments and Related Skills: • Designed and built customer recognition solution to facilitate fundraising campaigns. • Consulted with and mentored customer's architect on grouping rules and designed and wrote functional specifications. Sep 1999 – Aug 2005 CLIENTS: CITIBANK, BO AMERICA, ALLSTATE, CHASE, GMAC Database Developer, Data Analyst, DBA, Project Lead, SME &Solution Architect Supervisor: Jim Drake Full-Time Duties, Accomplishments and Related Skills: Sentricx: Fraud and Identity Verification • Analyzed consumer data, designed and developed fraud management product for credit theft, focusing on effective identity verification. • Generated scheduled and ad

hoc reports for the customer. Performed relational data modeling and data flow diagrams for various solutions. • Directed senior developers to create and implement demo for Congress that screened airline passengers, demonstrating the power of data housed at Acxiom. • Managed project team converting Application Verification System (AVS) from Muscato ENGIN middleware messaging tool to in-house parsing and messaging and scheduling system, achieving cost savings on maintenance and upgrades. Performed data mapping for complex data sources into common layout. • Trained team members on house holding and tracing products. • Performed design and development of Hercules hive-enabled data grid storage system to store reference data with keying technology • Supported building of identity verification pilot in partnership with Identico system. • Evaluated and used ERD tools such as ERWIN and Ration Rose. Maintained the database, managed storage, performance tuning and backup procedures Maintained the Oracle transactional database sized 6 TB with 400 MM reference records. • Created and maintained packages to post and retrieve transactions. • Database sized 6 TB, 400 MM reference records. Developed Oracle Stored Procedures, Functions, and Packages using PL/SQL as per the Requirement/ Design Documents. Worked with datacenter& network teams to manage data storage and archival. Tru64Unix, Linux, C/C++, STL, Multi- Threaded, ProC, OCI, Oracle 9.x, PL/SQL, Perl, Stored Packages, OEM, ERWin.
1998 – 1999 ANALYSTS INTERNATIONAL CORPORATION Consultant Duties, Accomplishments and Related Skills:
• Analyzed, designed, developed, and tested implementations for Virtuoso ll System for Alltel's client/server customer care and billing system. Prepared conceptual and functional design and testing procedures. Unix, C 1996 – 1998 MAXIS BINARIANG – Kuala Lumpur Malaysia Consultant / Programmer Analyst Duties, Accomplishments and Related Skills: • Analyzed, designed, and developed Transfer Account Procedure (TAP) in ProC for an OLTP Billing system. Designed, developed, and implemented Asset Data Engine to process telecommunication network data for WorldWin Telecommunication System. Performed design, configuration, and provisioning of network data for cable television using fiber optic technology in WorldWin Telecommunication System. Unix, C, Sockets, VB, Pro*c, Oracle 7, Oracle Forms, Oracle Report Writer, Sybase, T-SQL. 1994 – 1996 APTECH EDUCATIONS INDIA Instructor / System Engineer Duties, Accomplishments and Related Skills: • Delivered lectures on subjects such as C programming, Database design, SQA, Systems Analysis and Design, Oracle, Forms, Report writer. Guided and managed the students' projects at various stages and graded them according to the merit. COMPUTER INFORMATION TECHNOLOGY SKILLS ! Proficient in use of most major computer systems, information systems, spreadsheet applications, graphic and presentation applications, and word processing applications ! Programming Languages: C, C++ (STL), COBOL, ProC, PL/SQL, Java, JSP, SQL, T-SQL ! Script: Perl, Shell, RPM, Make Application Development Tools: Oracle Developer 2000(Forms), Affinium Unica, VB.net, ERwin, PowerBuilder, ODI, OWB, Microsoft SSIS,PL/SQL Developer ! Operating Systems: Tru64, UNIX 5.1a, Red Hat Linux 7.3, Windows NT ,DEC Alpha Tru64,Solaris ! Database: Sybase, FoxPro and Oracle 8.1.x, 9.0 & 10i,Oracle Forms SQL Server 2005,MS Access ! Data Processing & Data Verification: ETL,CRM,OLAP/ OLTP, Application Verification System (AVS), Trace & Claims, DataTrail (TU) Credit, Sentricx, Hercules, Keying & Data Hygiene ! Other Software: PRISM, SAP, Subversion, CVS, PVCS, ACE, IONA Orbix, MSOffice, FACETS 4.41, Visual Studio, Visio, ERD&DFD, PRISM, IDEAS. PROFESSIONAL SKILLS AND TRAINING ! Experience contributing to organizational optimization and change management processes. ! Subject Matter Expert and Go to person in the functional areas: budget execution, financial management, travel management, acquisition, charge card, financial assistance, personal

property, fleet management, and real property. ! Extensive experience contributing to optimization and change management processes. ! Regularly act as a liaison between system owners and users in order to facilitate a collaborative system optimization process.
KNOWLEDGE/SKILLS/ABILITIES ! Provided general oversight for organizational optimization and change management processes. ! Utilized and provided support in application development and data management life cycle methodologies and oversaw the development of various databases. ! Spearheaded data management activities, including managing information models and other data related programs and improved data management processes by reviewing, analyzing and implementing changes to meet current and future business requirements and optimized existing architecture. ! Led the development and management of databases, web applications and software applications for data management purposes. ! Contributed to the improvement of data management processes, such as data collection, processing, extraction and confidentiality. ! Ability to manage the development of databases, web applications and software applications. ! Knowledgeable of agile methods. ! Ability to utilize SAP's ECC integrated software, and Unison PRISM and Tableau. ! Ability to enhance data management processes, including data collection, processing and extraction. ! Knowledgeable of planning, coordination, and execution of business functions, resource allocation, and production and related project management. ! Working knowledge of the principles, methods, and tools (for example, surveys, system performance measures) to assess the effectiveness and practicality of information technology systems. ! Ability to manage and resolve conflicts, confrontations, and disagreements in a positive and constructive manner to minimize negative personal impact. ! Strong Leadership skills. ! Accountable for measurable high-quality, timely, and cost-effective results. ! Determine objectives, set priorities, and delegate work.
! Accept responsibility for mistakes. ! Comply with established control systems and rules. ! Knowledge of and experience with DOI's Financial and Business Management System (FBMS).

CAREER DEVELOPMENT CONTEXT (confirmed 2026-08-12)
- Took a planned nine-month sabbatical to upskill through the University of Denver graduate certificate program and additional reputable AI-related programs.
- Use this context only when relevant to a target role; describe it as professional development and do not add unsupported dates, credentials, outcomes, or program details.

# VERIFIED REUSABLE SKILLS & ACCOMPLISHMENT EVIDENCE

Use these facts as reusable evidence in future tailored resumes, cover letters, and skill-match analyses. Maintain the stated context and do not broaden the claims.

- **Client Discovery & Requirements Elicitation:** Interviewed Citibank, Allstate, and other financial-services and insurance clients to gather requirements and analyze identity-verification and prospecting needs.
- **Production Solution Delivery:** Helped develop customized solutions using Trace, Polk, and in-house Application Verification System (AVS) products that moved into production use.

- **Solution Design Documentation:** Created solution-design documentation for AVS conversion into a new solution framework.
- **Production Support:** Provided production support for Acxiom's AVS and during DOI contract conversion from legacy systems into FBMS.
- **Stakeholder Representation & Requirements Translation:** Represented Acquisition Directorate contracting officers in an FBMS Special Interest Group, translating AQD requirements to development teams for feature enhancements.
- **Testing & Release Validation:** Tested PRISM and SAP test-environment enhancements, provided developer feedback, and validated changes against acquisition-workflow needs before production release.
- **Workflow Automation Requirements & Validation:** Gathered requirements and tested/validated an IPP invoice-approval workflow in FBMS. Developers configured or built the solution; it automated notifications to CORs, COs, and AP technicians and incorporated substitute-approver controls before production rollout.

# CONFIRMED AI STRATEGY PROJECT EVIDENCE — 2026-08-12

- **Graduate project — AI Agent Design:** Designed an Invoice and Contract Lifecycle Agent for government contracting, intended for workplace use in government and potentially applicable to private-sector organizations. Do not describe the agent as commercially deployed or commercialized unless independently confirmed.
- **Graduate project — Organizational AI Strategy:** Developed a three-year AI strategy and roadmap for Mile High Logistics, including AI maturity assessment, opportunity identification, readiness analysis, budgeting, ROI modeling, vendor evaluation, and executive strategy communication.

# VERIFIED CONSULTING DELIVERY & AVAILABILITY EVIDENCE — 2026-08-12

- **Houston Onsite Availability:** Confirmed willing and able to relocate to Houston and work on-site as required.
- **Workshop Facilitation:** Led workshops on FBMS and contracting for contracting-official audiences.
- **Methodology Presentation:** Presented Acxiom methodology to Acxiom employees.
- **Consulting Deliverables & Visual Tools:** Used Visio, ERwin, Figma, draw.io, PowerPoint, Excel, and Teams for data modeling, process-flow diagrams, and data-flow diagrams.
- **RFP / RFI Review:** Reviewed RFPs and RFIs while providing support to contracting officials in the Acquisition Directorate.

Use these facts as reusable evidence in future tailoring. Do not represent RFP/RFI review as proposal ownership, authorship, or sales-pursuit leadership unless additional evidence is confirmed.

# VERIFIED PRODUCTION RELIABILITY & SRE-ADJACENT EVIDENCE — 2026-08-13

- **On-Call Production Support — Acxiom:** Served for multiple years as an on-call production-support developer for customer environments, responding to automated outage alerts and restoring AVS products and services within minutes to maintain availability.
- **On-Call Data-Load Support — DOI:** Provided on-call support during DOI FBMS conversion to verify successful and complete data loads.
- **UNIX/Linux, Shell, and Log Troubleshooting:** At Acxiom and DOI, used UNIX/Linux shell, Bash, and Korn scripts to start services on designated TCP ports; reviewed generated logs, diagnosed service-connectivity issues, identified root causes, and restored operations.
- **Incident Ticketing & Monitoring:** Active Remedy ticketing-system user for 10 years in the Acquisition Directorate, creating and resolving service and incident tickets. Supported FBMS workflow monitoring in SAP S/4HANA.
- **Networking/Security Awareness:** Applied working awareness of certificates and port monitoring while troubleshooting application-service connectivity; do not represent as network-engineering ownership.
- **Personal Project Tooling:** Used Kubernetes in private personal AI OCR projects. Clearly label this as personal-project experience, not enterprise production Kubernetes administration.

# CAREER SABBATICAL & AI PROFESSIONAL DEVELOPMENT

**Planned Career Sabbatical — AI Strategy, Applications & Professional Development**
Focused on expanding AI strategy, generative AI, governance, agentic AI, and enterprise-transformation capabilities through the University of Denver and reputable AI-focused programs. During this period, developed AI roadmaps, maturity assessments, ROI-backed business cases, an AI adoption-risk assessment, and an Invoice and Contract Lifecycle Agent graduate project.

# VERIFIED AI IMPLEMENTATION & PORTAL EVIDENCE — 2026-08-13

- **Graduate RAG Knowledge Base:** Built a retrieval-augmented generation document knowledge base for graduate work to support grounded AI-assisted access to document content.
- **Operations Training & Enablement:** Trained contracting officials and accounts-payable technicians on FBMS, PRISM, and related workflow procedures, reducing system-support requests.
- **AWS / AI Project Work:** Used AWS SageMaker Canvas for machine-learning work supporting the Invoice and Contract Lifecycle Agent graduate project.
- **Gumloop AI Agents:** Built Gumloop AI agents for data intake, skills matching, and job finding using external connectors, reusable skills, and triggers.

- **AI Tools Portal:** Created AI tools on the personal company portal: https://portal.aiguardiansllc.us/.

Context rules: Label the RAG knowledge base, SageMaker Canvas, and Invoice and Contract Lifecycle Agent as graduate/project work unless future evidence confirms professional deployment. The portal may be linked in resume headers for relevant AI roles as `AI Guardians Portal`.

# ADDITIONAL VERIFIED EXPERIENCE

• Supported Department of the Interior contracting officials with special FBMS exemption procedures for defense-contractor awards, ensuring qualifying awards were processed on time and excluded from public FPDS posting in accordance with applicable exemption requirements.

• Security status: Public Trust only; no formal contractual master-schedule ownership, formal program-budget ownership, or formal employee/vendor supervision.

VERIFIED AI GUARDIANS COMPANY TOOLKIT EVIDENCE — 2026-08-31

[VERIFIED_COMPANY_TOOLKIT]
[VERIFIED_PROFESSIONAL_CONTEXT] AI Guardians LLC — Created an 11-tool practical AI transformation toolkit supporting readiness assessment, governance, use-case prioritization, ROI/value framing, vendor evaluation, policy, agentic-AI controls, workforce enablement, grounded knowledge access and document-AI architecture. Portal: https://portal.aiguardiansllc.us/

[VERIFIED_TOOL][AI_READINESS] AI Readiness Assessment — assesses maturity across strategy, data, people, technology, governance and delivery.

[VERIFIED_TOOL][AI_GOVERNANCE] Governance & Risk Assessment — converts governance gaps into an actionable control plan.

[VERIFIED_TOOL][AI_COMPLIANCE] Risk & Compliance Checklist — reviews privacy, security, accountability and compliance controls.

[VERIFIED_TOOL][AI_PRIORITIZATION] Use-Case Prioritization Canvas — compares value, feasibility, readiness and risk.

[VERIFIED_TOOL][AI_ROI] AI ROI / Cost Estimator — frames investment, operating cost, benefits, payback and assumptions.

[VERIFIED_TOOL][VENDOR_EVALUATION] Vendor Evaluation Scorecard — evaluates capability, security, integration, governance and value.

[VERIFIED_TOOL][AI_POLICY] AI Policy Starter Kit — creates a practical policy foundation.

[VERIFIED_TOOL][AGENTIC_GOVERNANCE] Agentic AI Governance Tool — applies bounded-by-design controls to autonomous and agentic systems.

[VERIFIED_TOOL][AI_ENABLEMENT] Prompt Library by Department — supports governed, role-specific workforce enablement.

[VERIFIED_TOOL][RAG_KNOWLEDGE] AI Knowledge Base Search — plans grounded knowledge access for organizational content.

[VERIFIED_TOOL][DOCUMENT_AI] IDP Solution Advisor — compares intelligent document-processing architectures using volume, latency, sensitivity, governance and cost.

[VERIFIED_AI_AGENT]
[VERIFIED_PROFESSIONAL_CONTEXT]
[VERIFIED_PORTFOLIO_CONTEXT] Built and tested AI agents using Gumloop and LangGraph. Confirmed capabilities include retrieval, vector stores, APIs, workflow graphs, nodes, state management, routing, tool calls, evaluation, monitoring and risk mitigation. Professional and portfolio contexts must remain separately labeled when used.

[VERIFIED_CODING_AGENT] Used Cursor and GitHub Copilot for coding, debugging and tests.

[VERIFIED_AI_EVALUATION] Confirmed evaluation dimensions: accuracy, groundedness, latency and cost.

[VERIFIED_MODEL_MONITORING] Confirmed model-monitoring planning experience.

[VERIFIED_TRAINING_ENABLEMENT] Confirmed training experience for AI/tool adoption.

[VERIFIED_OUTCOMES] Confirmed outcome categories include time saved, quality improved and adoption; use quantified values only when separately verified.

Evidence classification: The AI Guardians tools are company-created toolkit products. Do not represent them as customer deployments unless separately confirmed. Use these markers to match future requirements involving AI readiness, governance, responsible AI, use-case prioritization, ROI, vendor evaluation, agentic controls, RAG/knowledge access, IDP/document AI, AI enablement, agent orchestration, evaluation or monitoring.VERIFIED AI GOVERNANCE & DATA GOVERNANCE EVIDENCE — 2026-09-06

**Graduate course/project context — University of Denver AI Ethics, Policy and Governance:**

- Responsible AI governance grounded in the EU AI Act, GDPR, OECD AI Principles, and NIST AI Risk Management Framework.
- Risk-based AI governance and lifecycle oversight across design, deployment, and post-deployment operation.
- AI governance operating models, ethics review boards, accountability mapping, documented decision rights, and human-in-the-loop controls.
- Lawfulness, fairness, bias mitigation, transparency, explainability, privacy-by-design, data minimization, purpose limitation, storage limitation, security, and data-subject rights.
- AI impact assessments, model audits, data audits, post-deployment monitoring, incident response, red teaming, data drift review, and continuous-improvement feedback loops.
- ChatGPT Health Privacy Impact Assessment: data inventory and mapping for PII/PHI, data-flow analysis, lawful-basis analysis, retention/destruction controls, consent gates, DSAR workflows, cross-border transfer safeguards, vendor/tool risk, TLS/AES-256, and RBAC.
- Risk analysis covering model memorization, PII/PHI leakage, over-collection, retention, cross-border transfer, misleading guidance, vendor misconfiguration, bias, discrimination, and explainability.

**Use rules:** Present these as graduate course/project and professional-development evidence. Do not describe them as production governance programs, client audits, regulatory ownership, or deployed controls unless separately confirmed by the candidate.

AI AGENT ENGINEERING & AUTOMATION PORTFOLIO

Grokking Agents in Production — Neural Academy Coursework

Completed structured coursework and labs covering:

- LLM workflows: augmented LLMs, prompt chaining, routing, parallelization, evaluator-optimizer patterns, and ReAct agents.
- Agent architecture: Google ADK, supervisor-specialist multi-agent systems, Model Context Protocol (MCP), Agent2Agent (A2A), tool routing, retrieval, and session memory.
- Retrieval and document intelligence: embeddings, chunking, cosine similarity, Qdrant vector search, sparse/hybrid retrieval, HNSW indexing, reranking, grounding, agentic RAG, OCR, VLMs, and multimodal document pipelines.
- Deployment and operations: Docker Compose, GCP Cloud Run, Cloud Build, Artifact Registry, Cloud SQL/Postgres, Secret Manager, service accounts, IAM, Pub/Sub, Cloud Logging, and serverless document pipelines.
- Observability and evaluation: Langfuse, Phoenix, OpenTelemetry/OTLP, OpenInference, deterministic metrics including ROUGE and trajectory checks, LLM-as-a-Judge, context relevance, answer relevance, groundedness/ hallucination checks, regression harnesses, online/offline evaluation, and evaluation gates.
- AgentOps and delivery: Git/GitHub, GitHub Actions, CI/CD workflows, evaluation baselines, encrypted secrets, deployment automation, and least-privilege security practices.

**Course technology/model ecosystem:** Cohere chat, embedding, and reranker models; Qdrant Cloud; Google ADK; GCP; Docker; PostgreSQL; Langfuse; Phoenix; OpenTelemetry; MCP; A2A; GitHub Actions. This is coursework/lab evidence unless separately confirmed as professional production deployment.

AI Guardians / Automated Resume Generator — Agent Workflow Portfolio

Designed and developed a Gumloop-based agent workflow that:

- Loads a verified master resume and job postings.
- Scores job fit using weighted requirements coverage, experience, tools, credentials, and preferred skills.
- Produces matched, partial, and missing-skill matrices with honest interview-probability estimates.
- Generates ATS-tuned, evidence-grounded resumes and concise job-specific cover letters.
- Runs optional interviewer-style fact finding for missing skills, requires user confirmation, and persists only verified evidence.
- Generates deep interview-preparation packages with company research, sector reading, HR questions, technical Q&A, challenge Q&A, STAR stories, gap bridges, and 30/60/90-day guidance.
- Uses guardrails for factual grounding, prompt-injection awareness, unsupported-claim prevention, AI-project context labeling, and separation of professional, graduate, and personal evidence.
- Uses Firecrawl for job-board discovery, Google Docs/Drive/Sheets for document and tracker operations, Gmail for status notifications, and scheduled JobListings processing.

- Applies the approved Pages/DOL resume-format reference, ATS-safe structure, naming rules, hyperlink validation, and tracker logging.

**Agent profile and technical context:** Gumloop agent orchestration; GPT-based conversational reasoning; Google Docs, Drive, Sheets, and Gmail integrations; Firecrawl web search/scraping; scheduled triggers; weighted fit scoring; ATS keyword alignment; evidence-grounded generation; human-confirmed fact finding; document generation; and email/status automation. This is an independent agent-development and workflow-automation portfolio project, not employer/client delivery unless separately confirmed.

## AI AGENT ENGINEERING & AUTOMATION PORTFOLIO

### Grokking Agents in Production — Neural Academy Coursework

Completed coursework and labs covering agent architecture, retrieval, document intelligence, deployment, observability, evaluation, and AgentOps:

- **Agent workflows:** Augmented LLMs, prompt chaining, routing, parallelization, evaluator-optimizer patterns, ReAct agents, agent-versus-workflow selection, and Google ADK.
- **Agentic retrieval:** Embeddings, chunking, cosine similarity, Qdrant vector search, sparse and hybrid retrieval, HNSW indexing, reranking, grounding, agentic RAG, and session memory.

- **Document intelligence:** OCR, CRNN/CTC concepts, Transformers, VLMs, multimodal document analysis, fixed/semantic/multimodal/hybrid chunking, and serverless document pipelines.
- **Multi-agent systems:** Supervisor-specialist architectures, Model Context Protocol (MCP), Agent2Agent (A2A), tool routing, retrieval, Docker Compose, service authorization, and service-to-service binding.
- **Deployment and cloud operations:** Cohere chat/embedding/reranker models, Qdrant Cloud, Docker, GCP Cloud Run, Cloud Build, Artifact Registry, Cloud SQL/Postgres, Pub/Sub, Secret Manager, service accounts, IAM, and Cloud Logging.
- **Observability and evaluation:** Langfuse, Phoenix, OpenTelemetry/OTLP, OpenInference, ROUGE, trajectory evaluation, LLM-as-a-Judge, context relevance, answer relevance, groundedness/hallucination checks, regression harnesses, online/offline evaluation, and evaluation gates.
- **AgentOps:** Git/GitHub, GitHub Actions, evaluation baselines, CI/CD workflows, encrypted secrets, deployment automation, and least-privilege security practices.

**Context:** Coursework and lab evidence; do not represent this as client production deployment unless separately confirmed.

AI Guardians / Automated Resume Generator — Independent Agent Workflow Portfolio

Designed and developed a Gumloop-based AI agent workflow that:

- Loads a verified master resume, job postings, company research, and user-approved instructions.
- Scores fit using weighted requirements coverage, relevant experience, tools/methods, credentials, and preferred skills.
- Produces matched, partial, and missing-skill matrices with honest interview-probability estimates.
- Generates ATS-tuned, evidence-grounded resumes and concise job-specific cover letters.
- Uses optional human-confirmed fact finding for gaps and persists only verified experience.
- Generates deep interview-preparation packages with company research, reading links, HR questions, technical Q&A, challenge Q&A, STAR stories, gap bridges, and 30/60/90-day guidance.
- Applies factual-grounding guardrails, prompt-injection awareness, unsupported-claim filters, graduate/personal/project context labeling, duplicate prevention, and no-application-submission safeguards.
- Uses Firecrawl for job discovery; Google Docs, Drive, Sheets, and Gmail integrations; scheduled JobListings processing; Job Tracker updates; and email status automation.
- Applies ATS tuning, current resume-format standards, candidate-first naming, clickable-link validation, two-page layout validation, and document-page-count checks.

**Agent profile and technical context:** Gumloop orchestration; LLM-based reasoning and generation through the platform runtime; Google Docs/Drive/Sheets/Gmail integrations; Firecrawl web search and scraping; scheduled triggers; weighted fit scoring; semantic job-to-resume alignment; evidence-grounded generation; human-confirmed fact finding; document generation; and workflow/status automation. No fixed model name is claimed because model routing is platform-controlled and may change.

**Context:** Independent agent-development and workflow-automation portfolio project; not employer/client delivery unless separately confirmed.

# AI EVALUATION & DOCUMENT INTELLIGENCE EVIDENCE — CONFIRMED SEPTEMBER 2026

## Stanford TECH 77 Document-Intelligence Project | Academic / Prototype Work | Aug–Sep 2026

• Designed evaluation sets for an OCR-to-RAG document-intelligence workflow using invoices, forms, and multi-page PDFs, with datasets including FUNSD, CORD, and DocVQA.

• Evaluated OCR extraction and downstream RAG behavior, including substitutions, omissions, field-extraction errors, reading-order failures, retrieval misses, irrelevant chunks, unsupported answers, and hallucinations.

• Applied or planned precision, recall, F1, ROC-AUC, confusion matrices, character-error rate, word-error rate, field-level accuracy, retrieval metrics, and comparisons of latency, throughput, cost, and output-quality distributions.

• Compared OCR architectures and their effects on downstream RAG performance.

Neural Maze Production OCR | Course Labs / Production-Oriented Architecture

• Developed and evaluated production-oriented OCR architecture concepts involving Rust, vLLM, Redis, Kubernetes, KEDA, Qwen-based inference, Azure AKS, and GCP GKE.

• Designed structured evaluation and observability approaches for document-processing and RAG workflows.

CONTEXT LIMITATIONS

These AI evaluation and production-oriented architecture activities are academic, course-lab, prototype, or design work. They have not been deployed to external clients or a live production user base. AWS Bedrock has been studied but not used directly.

VERIFIED FACT-FINDING EVIDENCE — VERTICE AI SOLUTIONS CONSULTANT — 2026-09-07

End-to-end implementation: Led FBMS production conversions for the Office of the Secretary and National Park Service, conducting SME interviews and data/functional assessments; designing, building, testing, migrating, and supporting the solution after go-live.

Concurrent delivery: Managed concurrent NPS production conversion, Bureau of Reclamation discovery and design, SAP S/4 testing, funds realignment, and client-support workstreams, prioritizing conversion and training milestones and delegating tasks to junior associates.

Configuration and administration: Configured PRISM users for the Office of the Secretary and National Park Service and administered user, account, and workflow functions for Interior Business Center stakeholders.

API and JSON fluency: Personally inspected and tested JSON payloads, mapped application fields to API request and response structures, tested endpoints, and troubleshot API integration issues. In a local MLX LLM deployment, used curl to test /v1/chat/completions and /v1/completions, inspected response JSON, identified missing or unexpected fields, compared endpoint behavior, and corrected API-base, endpoint, port, and response-format mismatches affecting a Streamlit application. Applied related structured-output, JSON-schema, endpoint, and fallback concepts in Stanford TECH 77 and Neural Maze AI-agent/OCR coursework and personal portfolio projects.

Technical customer ownership: Served as a technical point of contact for Interior Business Center users, handling PRISM, FBMS, and IPP Level 2/3 escalations, workflow administration, FPDS exemption-related technical processes, and account administration.

Training and enablement: Delivered AVS product and solution training to client project managers and technical teams in financial-services and insurance sectors, including Q&A on solution customization and API interfaces.

Product feedback: Documented FBMS implementation and operational issues, analyzed PRISM and FBMS enhancement requests, and presented requirements and customer feedback to SIG, product, vendor-management, and stakeholder teams.

Procurement and ERP fluency: Used SAP S/4HANA purchase-order, accounts-payable, vendor, and core-financial modules as an administrator; supported FBMS implementation on SAP ERP.

AI-assisted delivery: Used Cursor to develop a personal e-trading dashboard and AI assistant, and built Gumloop agents for career advancement and related automation projects. These remain personal or portfolio work, not customer deployments.

Work authorization: U.S. citizen; authorized to work in the United States without sponsorship.

IMA AI ENABLEMENT FACT-FINDING — CONFIRMED SEPTEMBER 2026

• Microsoft Copilot used in 2026 for the document-intelligence processing project; 365 architecture awareness and SharePoint user experience confirmed.

• Designed, developed, and fine-tuned a Gumloop AI agent that analyzes job-match evidence against job requirements, generates evidence-based skill-gap analysis and red/yellow/green score tiering, conducts fact-finding Q&A, and generates tailored resumes, cover letters, and interview-preparation packages with links and deep Q&A. Context: AI Guardians company / internal AI enablement tooling.

• AI Guardians tools: performed AI enablement work involving job-match analysis, evidence-based gap analysis, fact finding, document generation, and interview preparation.

• Information architecture and knowledge management: worked with metadata, data dictionaries, and document repositories for Unison PRISM and Acxiom Application Verification System products.

• Insurance domain: supported a customer identity-verification component in the Acxiom Application Verification System.

• Scripting/automation: Bash confirmed.

• Work model: willing to work from IMA's Denver office at least three days per week and willing to travel periodically.

• Target role: AI Enablement Analyst.

## CONTEXT LIMITS

Do not claim Microsoft Copilot Studio, Power Platform, Power Automate, or Power Apps unless separately confirmed. Do not claim external-client or live-production deployment of the Gumloop AI agent unless separately confirmed.

## LOCKHEED MARTIN FACT-FINDING UPDATE — CONFIRMED SEPTEMBER 2026

• As a federal-government contractor, assisted contracting officials and specialists across FAR-governed contracting work, including IDIQs, task orders, contracts, purchase orders, RFPs, and sole-source actions.

• From the system perspective as FBMS administrator, assisted with modifications, invoice payment, award processing, sales orders, purchase requisition funding, obligation tracking, closeout, and compliance support.

• Communicated directly with vendors regarding invoices, disputes, and contract modifications.

• Assisted with and performed contract modifications on DARPA projects, including postings flagged for FPDS exemption.

• Served as PRISM administrator, FBMS administrator, and SAP administrator; held an IPP disburser account to resolve IPP postings and related tasks.

• Confirmed willingness to work full time onsite in Highlands Ranch, Colorado.

CONTEXT LIMITATIONS

The candidate did not confirm work with specific FAR clauses. Do not claim independent contracting-officer authority, formal prime/subcontract administrator title, or specific DFARS clause expertise unless separately confirmed.

# CONFIRMED FACT-FINDING EVIDENCE — Symetra Developer Advocate, AI Enablement

- AI Guardians MVP: Built a multimodal document-intelligence and invoice-processing workflow automation MVP intended for the federal government sector; the product has not yet been sold. Built with Python, APIs, LangGraph, and Codex as part of Stanford Continuing Studies TECH 77.
- AI Guardians portal: Built portal.aiguardiansllc.us using Codex; classify as company/product work, not sold or represented as customer production deployment.
- Career Advancement Agent: Built with Gumloop, including skill-gap analysis, fact-finding subagent, and interview-preparation subagent; classify as a combination of company, portfolio, and personal work as applicable.

- Enablement: Trained more than 85 cohort students on an Enterprise Financial Business System and created acquisition-cohort training content.
- Presentations and training: Delivered training or demonstrations on identity-verification products and solutions, acquisition-fund realignment, contract deobligation, and contract closeout; demonstrated an identity-verification pilot to U.S. congressional stakeholders.
- Effectiveness measures: Acquisition/FBMS training effectiveness included reduction in business incidents, contracting-official time, and process-cycle time, plus improved user satisfaction.

- Administration: Configured PRISM as an administrator for the acquisition directorate; this is enterprise-system administration, not AI-tool administration.
- Logistics: U.S. citizen; home internet meets Symetra's stated remote requirement; target compensation $125,000.

Context rule: Do not claim that the AI Guardians MVP was sold, deployed to a customer, or in production. Do not claim enterprise AI-tool administration, MCP implementation, or production Python/API ownership beyond the confirmed MVP and TECH 77 work.

VERIFIED FACT-FINDING EVIDENCE — CIVICPLUS AI ENABLEMENT ENGINEER — 2026-09-28

Academic / portfolio project — OCR Document Intelligence: Built a modular OCR and document-intelligence pipeline in Python 3.11 using Pydantic typed schemas, structured extraction contracts, validation, LangGraph conditional routing, evidence checks, and one controlled corrective retry. Developed a Streamlit interface for document uploads, extraction review, gate results, and downloadable JSON audit records. Integrated Tesseract/pytesseract, Pillow, pypdf, Hugging Face Transformers, PyTorch, pytest, PyYAML, and Python standard-library components for OCR, PDF extraction, schema testing, workflow testing, experiment configuration, manifest hashing, dataset metrics, and confidence intervals. The Donut adapter supported lazy local-model loading and mock fixture mode; live inference remains unverified. This is academic/portfolio work, not employer or client production.

AI Enablement Engineer & Agent Workflow Developer — Gumloop Platform | Professional / Portfolio Context: Built and tested Gumloop-based AI workflows that help users assess job candidacy, prepare resumes and cover letters, evaluate skill gaps, and prepare for interviews. Used external connectors, document workflows, structured evidence, scoring logic, human-confirmed fact finding, and guarded generation. This is company-created platform/toolkit and portfolio work, not an external customer deployment.

Remedy and support operations: Served as a senior Remedy user supporting Department of the Interior initiatives. Configured and used Remedy workflows for incident and service support before AI-assisted ticketing was available. Supported issue intake, workflow routing, escalation, documentation, and coordination across technical and business teams.

Data engineering and conversion: Built the ETL data pipeline for legacy-system conversion to FBMS, including data extraction, transformation, validation, migration support, and production-load verification. The conversion consolidated fragmented legacy systems into a unified Department-wide financial-management platform.

Reusable AI patterns: Created reusable Codex skill sets for a Finance AI agent as part of an AI in Finance course. These skills captured repeatable agent instructions and patterns for finance-focused AI workflows. This is course/portfolio evidence, not client production.

Agile delivery: Participated in standups, sprint planning, Scrum activities, and related iterative delivery practices during the FBMS conversion.

Implementation and support workflows: Automated or supported implementation and technical-delivery workflows for external financial-services clients at Acxiom and for the Interior Business Center Acquisition Directorate. Responsibilities included requirements capture, solution testing, implementation support, user training, and invoice-workflow administration.

Work authorization: U.S. citizen; authorized to work in the United States without sponsorship.

# VERIFIED FACT-FINDING EVIDENCE — APTIVE RESOURCES MANAGEMENT ANALYST (AI CROSS-FUNCTIONAL TEAM SUPPORT) — 2026-09-28

Organizational analysis and data collection: Conducted acquisition-contract workflow analysis and structured data-collection interviews with subject-matter experts from the National Park Service and Bureau of Reclamation during the FBMS conversion project. Used stakeholder findings to assess current processes, identify requirements, and support design and implementation decisions.

Policy and operational procedures: Designed and built operational procedures for IPAC, funds realignment, and FPDS exemption processes, translating acquisition and financial-system requirements into practical guidance for contracting and operational teams.

Training materials and adoption: Developed cohort training materials for new Interior Business Center Acquisition Directorate employees, including operational documents and assimilation guides. Tracked post-cohort adoption using the number and pattern of Remedy tickets created after training.

SharePoint: Participated as a member of a SharePoint implementation test team and used SharePoint as an active user for collaboration, document access, and implementation validation.

Distributed field support: Supported distributed teams across Herndon, Virginia; Boise, Idaho; and Hawaii on aviation mission-contract work. Traveled to Boise to help resolve contract-fulfillment issues and vendor and invoice-management problems.

Public Trust: Previously held Public Trust status; current status may be expired. U.S. citizen and able to undergo the required process to obtain and maintain Public Trust.

Not supported (do not claim): VA employment or VA contractor experience; digital-health AI work; formal surveys or focus groups; position-description or performance-plan modernization; formal leadership status reporting for cross-functional working groups.

VERIFIED FACT-FINDING EVIDENCE — APPIAN PRINCIPAL CONSULTANT (PUBLIC SECTOR) — 2026-09-29

RPA: Participated in testing a robotic process automation (RPA) solution at the Interior Business Center (product not recalled). Correction: the candidate does not have UiPath skills; do not claim UiPath.

Object-oriented programming: Wrote production C++ code using classes and inheritance for metadata components of Acxiom's in-house HIVE data-grid computing platform (Acxiom, 1999–2010 tenure). Do not add EMC acquisition history or other internet-sourced platform claims.

Team leadership (project leadership, not formal people management): Served as program manager for a four-person team on the Acxiom AVS conversion. Led a three-person team building the airline passenger-screening system demonstrated to Congress. Served as process lead on DOI funds-realignment projects affecting 20+ contracting officials.

Database integration and ETL: Built FBMS conversion ETL processes in Oracle PL/SQL using packages and stored procedures. Integrated with PRISM through its API using Oracle Call Interface (OCI) calls and used Oracle ODBC connectivity through PL/SQL.

Data modeling: Designed and delivered Oracle-based data-warehouse solutions, including for GE Money; all warehouse projects were on Oracle.

Client advisory: Advised Citibank and Allstate stakeholders on identity-verification solution requirements and customization.

Logistics: Available for up to 20% travel. Open to supporting commercial and public-sector clients.

Not supported (do not claim): Appian or other low-code platform experience; UiPath; SOAP; JDBC; professional cloud (AWS/GCP/Azure/containers); CI/CD or professional test-driven development (GitHub use only).

USER-PROVIDED PORTFOLIO CONTENT — STANDARD RESUME SECTION — 2026-09-30

Section title: AI ENABLEMENT, TRANSFORMATION & AI AGENT ENGINEERING PORTFOLIO (replaces "Career Sabbatical & AI Professional Development" on all resumes).

• Internal AI enablement tooling: Career Advancement Agent, Gap Analysis Skill, and Fact-Finding Subagent.

• LLM risk assessment of ChatGPT Health covering privacy, governance, compliance, and ethical usage.

- AI Guardians tools (hyperlinked to https://portal.aiguardiansllc.us/): AI readiness, governance & risk, use-case prioritization, ROI, vendor evaluation, policy, agent oversight.
- Document Extraction MVP comparing Tesseract, Donut, and vision-language models, with LangGraph validation.
- 3-year enterprise AI roadmap covering maturity assessment, opportunity identification, readiness analysis, budgeting, ROI modeling, vendor evaluation, and executive communication.
- In development: Predictable Trading Copilot — a shared-ownership architecture for financial AI intelligence.

Header rule: every resume contact line includes "AI Guardians" hyperlinked to https://portal.aiguardiansllc.us/, placed after LinkedIn.

VERIFIED FACT-FINDING EVIDENCE — DDRC ENTERPRISE & HEALTH INFORMATION SYSTEMS ANALYST — 2026-09-30

Healthcare: TennCare (MPHASIS HP) engagement lasted about 8 months, ending December 2010 (May–Dec 2010). Handled patient data; candidate does not recall specific details — do not add detail beyond the master resume's TennCare bullets.

Privacy and security training: Completed HIPAA, federal privacy, and security-awareness training, plus other required training for a GS-13-level, moderate-risk Public Trust role. Handled sensitive personal data at Acxiom and sensitive vendor data in FBMS, including banking and SAM registration information for federal contractors.

Access management (PRISM/FBMS administrator): Provisioned and removed user accounts at onboarding and offboarding; ran periodic access reviews; enforced segregation of duties (e.g., separating requesters and approvers); managed privileged/admin accounts; documented access requests and exceptions. Also handled the FPDS-NG exemption process for DARPA contracts in FBMS and supported DATA Act compliance.

Reports, data, notifications: Modified data in Tableau and in PRISM's Oracle databases using SQL; set up notifications in PRISM.

Vendor management: Served as the main contact between Muscato and Acxiom. At FBMS, provided data to the primary contact for PRISM vendor support tickets.

Audits: Supported many Inspector General audit requests for contracts awarded by the IBC Acquisition Directorate.

Incident response and continuity: Took part in incident response and business-continuity planning at the IBC Acquisition Directorate.

Logistics: Valid Colorado driver's license with reliable transportation; can work on-site in Lakewood, CO, Monday–Thursday; salary expectation up to $115,000.

Not supported (do not claim): CareLogic or any EHR administration; Microsoft Dynamics GP or any ERP other than SAP; HRIS/payroll/LMS/expense SaaS (Paycom, Relias, etc.); application selection, upgrade, consolidation, or retirement beyond the FBMS conversion; application inventory maintenance; software licensing, renewals, or SOW management.

# VERIFIED FACT-FINDING EVIDENCE — SHI SR. PROGRAM ANALYST, TRANSFORMATION — 2026-10-09

Acceptance criteria: Wrote rule-oriented acceptance criteria for the FBMS legacy-system conversion, used to validate converted data against conversion and translation rules.

Agile delivery: Participated in FBMS sprint planning, daily standups, sprint reviews, and demonstrations as the conversion progressed from mock to cutover to production environments. Role: participant/contributor (did not lead or facilitate the sessions).

Project planning: Built and maintained the project plan for the Acxiom AVS conversion as program manager for a four-person team.

Power BI: Power BI user (do not claim building or administration).

Dashboards: Contributed to Tableau dashboards professionally. Built an AI Incident dashboard for AI Guardians (company/portfolio work; not a customer deployment).

Campaign data pipelines: Supported campaign-management data pipelines for GE Money multichannel/prospect campaigns and a St. Jude fundraising solution, using Oracle as the backend. Present as technical campaign-data support; do not claim GTM, sales enablement, launch, or pipeline-tracking ownership.

Communications and documentation: Wrote status summaries for new FBMS features. Authored the Funds Reallocation SOP, the IPAC SOP, and the IBC Aviation Billing Correction Guide.

Lifecycle: Retired the legacy AVS application after converting it to the new solution framework.

Intake and prioritization: Provided FSALT prioritization rankings for enhancement items important to the Acquisition Directorate.

Business-operations reporting: Supported Acquisition Directorate business operations with fund-intake, WBS, and sales-order information through reports.

Logistics: Remote work, 5–10% travel, and a $125,000–$160,000 compensation range are acceptable.

Not supported (do not claim): FinOps, IT-spend or cloud-cost optimization, or software-licensing analysis; Asana; writing user stories; newsletters; formal GTM, sales enablement, product launch, or sales-pipeline tracking.

VERIFIED FACT-FINDING EVIDENCE — BLACK & VEATCH BUSINESS PROCESS TECHNOLOGY SENIOR ANALYST — 2026-10-09 (confirmed by candidate)

Power BI (professional — DOI/IBC Acquisition Directorate): Built Power BI reports on contracting status, invoices, obligations, and core financials. (Supersedes the earlier "Power BI user only" note.) Do not claim DAX, data modeling, or Power BI administration unless separately confirmed.

AI Guardians tools: Built browser-based AI planning tools for the AI Guardians portal (https://portal.aiguardiansllc.us/), including the Use-Case Prioritization Canvas, AI ROI / Cost Estimator, and Vendor Evaluation Scorecard. Company product; these are web tools, NOT Microsoft Power Apps canvas apps.

Excel: Intermediate, including VLOOKUP and macros.

Streamlit apps: Built Streamlit apps for local LLM inference and a Trading Agent MVP for AI Guardians (company/ portfolio work).

RPA: User testing of an RPA solution at the Interior Business Center (product not recalled; no UiPath).

Tableau (Salesforce Tableau): Created calculated fields and connected Tableau to the FBMS data source for reporting. These details apply to Tableau, not Power BI.

Microsoft Copilot: Used Microsoft Copilot in Word, Excel, Teams, Outlook, and Copilot Chat for daily business operations at AI Guardians (2026).

Logistics: Can work on-site in Greenwood Village, CO for the first 90 days; can complete background check, drug screen, and motor-vehicle-records check; Colorado range $95,612–$167,332 acceptable.

Not supported (do not claim): Power Automate; Power Apps; Dataverse; DAX; Power Platform AI Builder or Copilot Studio; ownership of data-quality rules, master data, or data standards; technology solution evaluation/ recommendation beyond the Muscato framework; mentoring or reviewing junior analysts' work; engineering, construction, utility, or infrastructure industry experience.
